

## CONGRESSMAN ALDRICH

Uses Peruna in His Family With Very Great Success.

CONGRESSMAN WILLIAM F. ALDRICH, OF ALABAMA.

Congressman William F. Aldrich, of Alabama, in a recent letter to the Peruna Medicine Company, written from Washington, D.C., speaks of their great tonic and cathartic cure in the following words:

"This is to certify that Peruna, manufactured by The Peruna Medicine Co., of Columbus, Ohio, has been used in my family with success. It is a fine tonic and will build up a depleted system rapidly. I can recommend it to those who need a safe, reliable medicine for debility."

Address The Peruna Medicine Co., Columbus, Ohio, for a free copy of "Summer Catarrh," which treats on the phases of catarrh peculiar to hot weather, and contains Dr. Hartman's experience of fifty years in the treatment of these diseases.

## INEXPENSIVE MONARCHS.

It would seem that riches and regal power do not always go together; at any rate, there are several monarchs in receipt of salaries that the average city clerk would dispute.

The King of Portugal is probably the poorest sovereign in Europe. He is supposed to receive £32,000 a year, but it is alleged it is some time since he received anything at all, because money is uncommonly "tight" in the national exchequer. Many of the royal descendants pay their tradesmen with credit notes, but no doubt in the future when Portugal, by practicing the strictest economy, rights herself they will be above par.

The Sultan is a rich man, but his position is not responsible for his wealth. Were it not that he has enormous private means he could not rule over Turkey, because some years have now elapsed since he drew even a portion of his salary, although the Turks boast that he is paid at the rate of £780,000 per annum for occupying the throne. This is true on paper; but in reality Abdul Hamid gives his services for nothing, owing to the bankrupt condition of his country.

Forty-five shillings a week is the munificent salary of the King of Samoa. The Berlin general act of 1889 brought this once powerful monarch face to face with poverty and settled

the allowance mentioned upon him in lieu of the thousands he formerly played with. The most humiliating fact, however, is that his chief justice receives £1,200 and his president of council £1,000 a year, while his most insignificant subject has an income little below his own.

Until quite lately the King of Dahomey received the equivalent of £1 per week from the French government to enable him to live in exile at Martinique. But eventually he appealed for an increase in salary in order to maintain a larger retinue with the result that he was granted an additional five francs. After all, 24 shillings a week is not an exorbitant allowance for a man who was once the most powerful monarch in west Africa.

The privilege of being King of Luxemburg is not an enviable one from a financial point of view, at any rate, for although the salary accruing to the monarch is supposed to be £15,000 a year, there is often difficulty in collecting as many hundreds. The whole kingdom only extends over an area of 1060 square miles, defended by an army of 350 men. The inhabitants pay taxes when they choose to do so, but directly the government becomes unpopular the country refuses to support it and the monarch, whose pay is monthly and not infrequently years overdue, side with the people. At such times the king has to give his country credit, and at others

finds it difficult to secure the funds to uphold the dignity of the throne.

The unfortunate Emperor Kwang Hsu of China is supposed to be able to live without money; at all events, his government does not provide him with a penny. There is absolutely no grant to the reigning monarch in China, but the emperor has the privilege of being able to order any goods he may require, and will not be asked to pay for them. The same rule applies to the dowager empress, but she receives pocket money in the shape of £250,000 per annum for "giving advice" to the emperor on political matters.—Tit-Bits.

You assume no risk when you buy Chamberlain's Colic, Cholera and Diarrhoea Remedy. Elvey & Hulett will refund your money if you are not satisfied after using it. It is everywhere admitted to be the most successful remedy in use for bowel complaints and the only one that never fails. It is pleasant, safe and reliable.

It is perhaps paradoxical to say that the toponym who will risk their lives during the race on our cup defender will do it for the sake of their Constitution.

## THE ALTAR COPPER MINING COMPANY.

(From the Jerome Mining News.)

Since the return of Messrs. Robert Mitchell and Arthur Cordner from their visit to the properties of the Altar Mining Company in Altar district, Sonora, Mexico, so many inquiries have been directed to them concerning the results of their investigations that they have decided to give out for publication a statement of what they saw and learned, for the information of those who purchased the first issue of stock, as well as the public generally. Accordingly they have authorized the following, with the assurance that special care has been observed to avoid exaggeration in every detail, and give only the exact facts. This assurance coming from these well known gentlemen is quite sufficient to satisfy those acquainted with their characters and high standing in this community. For the benefit of others, however, it may be added that they are both old residents of Jerome, and men in whom their friends and acquaintances have found reason to place implicit confidence. Mr. Mitchell, who is a metallurgist of many years' experience, is the present superintendent of the United Verde Copper Company's smelter. Mr. Cordner is a member of the firm of Hoover & Cordner, proprietors of the Fashion saloon in Jerome, and has had much practical experience in mining.

The properties of the Altar Copper Mining Company consists of two groups comprising 138 pertenencias, or about 245 acres, all under patent from the Mexican government. The Montana Verde group which contains 62 pertenencias, or about 105 acres, is situated three miles from the Altar river, and about 40 miles northwesterly from Santa Ana, a town on the Sonora railway, 65 miles south of Nogales. It is easily accessible from Santa Ana by a splendid wagon road, and the cost of freighting to and from that point is only 10 per cent in Mexican money, or \$5 in gold. The town of Altar, the seat of the district, is 23 miles distant in a southwesterly direction from the group, by an equally good road. The altitude at the Montana Verde is about 2000 feet above sea level. Along the Altar river, within a few miles of the property, are a number of productive ranches and a couple of flour mills. The face of the country on and in the vicinity of the group may be said to be mostly mountainous, the mountains are not high or steep, and resemble more rolling hills. There is an abundance of timber suitable for both fuel and mine timbering within easy distance and accessible by wagon. The Altar river is a perennial stream, having a good flow of never-failing water, more than sufficient to supply the ranches and the water is available very easily be made available for use upon the Montana Verde by the construction of a ditch to tap the stream a short distance above the mine, and the company is now negotiating with the owner of large water rights in the river, for the purchase of a right to divert sufficient water to supply the property in this manner for all time to come.

The group as a whole is not especially rough, being rather undulating, but the surface over nearly the entire area is much broken by almost innumerable rock croppings and prominences of all shapes and sizes. These croppings do not appear to be in ledge formation, but project in the form of great detached masses and boulders without any regularity whatever in the manner of their emplacement. Everywhere they show a vivid green in color, and examination shows them to be largely carbonates of copper, oxides of copper and oxides of iron, of all kinds and grades, the carbonates predominating. In the depressions between these masses of croppings, the surface is earth which evidently has been formed to a considerable extent from the decomposition of the rock croppings, judging from its appearance, and is strewn over with small pieces of float of the same general character as the rock. This earth or dirt, however, is very superficial, and it is only necessary to dig a short distance before rock closely resembling the surface croppings is encountered. Assays of this surface rock made after returning to Jerome, show that it will run on an average six per cent in copper, and Mr. Mitchell is of the opinion that there is enough of it in sight to fully justify the installation at once of a 100-ton blast furnace on the property and the commencement of smelting operations on a substantial scale. The cost of freighting to and from Santa Ana would be more than overcome by the cheapness of both labor and fuel. The established wages of drill men is \$2 per day in Mexican money, or \$1 in gold. Outside men receive \$1.75 per day, 87 1/2 cents in gold. Hard wood for steam can be bought at \$2.50 per cord in gold.

The work already done upon the property is not extensive. A vertical shaft has been sunk to a depth of 65 feet. An examination of the walls of this shaft shows an exceedingly irregular formation and multiform characters of rock, varying from rich sulphides of copper near the surface, to a blue slate impregnated to some extent with quartz, streaked with sulphide at the bottom. Assays of the ore taken from the upper part of the shaft run from

## Asthma Cure Free!

Asthmalene Brings Instant Relief and Permanent Cure in All Cases.

Sent ABSOLUTELY FREE on Receipt of Postal.

Write Your Name and Address Plainly.

After having it carefully analyzed, we can state that Asthmalene contains no opium, morphine, chloroform or ether. Very truly yours, REV. DR. MORRIS WECHSLER, Avon Springs, N. Y., Feb. 1, 1931.

Dr. Taft Bros. Medicine Co. Gentlemen: I write this testimonial from a sense of duty, having tested the wonderful effect of your Asthmalene, for the cure of Asthma. My wife has been afflicted with spasmodic asthma for the past 12 years. Having exhausted my own skill as well as many others, I changed to see your sign upon your windows on 10th street, New York. I at once obtained a bottle of Asthmalene. My wife commenced taking it about the first of November. I very soon noticed a radical improvement. After using one bottle her Asthma has disappeared and she is entirely free from all symptoms. I feel that I can consistently recommend the medicine to all who are afflicted with this distressing disease.

Yours respectfully, O. D. PHELPS, M. D. Feb. 5, 1931. Dr. Taft Bros. Medicine Co. Gentlemen: I was troubled with Asthma for 22 years. I have tried numerous remedies, but they have all failed. I ran across your advertisement and started with a trial bottle. I found relief at once. I have since purchased your full-sized bottle, and I am ever grateful. I have a family of four children, and for six years was unable to work. I am now in the best of health and am doing business every day. This testimony you can make such use of as you see fit. Home address, 235 Rivington street.

Trial Bottle Sent Absolutely Free on Receipt of Postal. Do not delay. Write at once, addressing DR. TAFT BROS. MEDICINE CO., 79 East 130th St., N. Y. City.

4 to 10 per cent copper. It is the intention of the company to continue the shaft at a depth of 100 feet, and then drift through the ore body. A large force of men is now at work.

It is impossible for any person to look over this group, to walk over and among the masses of mineralized rock and note that characteristic greenish appearance everywhere in evidence, without forming the positive conviction that underneath his feet lies hidden an immense body of copper ore, greater perhaps, if the indications count for anything, than has ever yet been uncovered. He cannot be brought to the belief that this copper ore came from any other source or direction than below, nor that the visible copper in the ore was deposited upon the crest of the hill where the ore occurs, by the action of any surface stream. But though he will conclude his inspection of the Montana Verde with the firm conviction that a little development work will demonstrate what appears now so evident, it is not until the visitor reaches the San Jose group, the other property of the company, and makes his examination, that he is warranted in saying that the company has a mine the character of which is such as assured.

The San Jose group lies northwesterly of the Montana Verde, a distance of about 35 miles, and is approximately 65 miles from the Gulf of California. It is reached from Santa Ana, on the Sonora railway, by an excellent wagon road. Distance 85 miles. There is also a good hard road from Tucson, 125 miles. The regular cost of freighting from Santa Ana to the mine is \$20 in Mexican money, or \$10 in gold, per ton. The elevation of the property has not been ascertained exactly, but must be from two to three hundred feet lower than the Montana Verde, or from 1700 to 1800 feet above sea level. The group comprises 76 pertenencias, or about 190 acres. Like at the Montana Verde good timber is within convenient distance, and water for operating a plant and for domestic purposes is available. In fact water sufficient for smelting purposes has been encountered in working the property. The surface formation is entirely different from that of the Montana Verde, being characterized by well defined ledges having a general easterly and westerly trend. Across three of the largest of these ledges lying parallel and apparently constituting parts of a single formation, the thickness of the 300 feet. Nearly all of the work upon the group has been done upon a ledge or vein which may be readily traced for over 2000 feet on the property, and crops boldly for a distance of 1400 feet. Its average width at the surface is eight feet, and it dips 69 or 70 degrees north, and has every appearance both above and below the surface, of a true fissure vein. Upon this shaft was sunk by the former owners of the property to a depth of 161 feet. At the 50-foot level a station was cut on the northerly side of the shaft back to the center of the vein which had inclined away from the shaft until at this point only about one-half of it was in vein matter proper. A winze was then sunk twenty-four feet on this vein when water was struck in such quantities that it could not be handled with their double windlass, and the winze was abandoned. A drift or tunnel was then driven horizontally on the ledge from the station for a distance of over 120 feet. In this drift the vein shows a width of from seven to nine feet, and is plainly traceable to the surface. The vein matter is quartz, feldspar and talc. The copper occurs in the form of chalcopryite and bornite. Assays of average samples across the drift, and for its entire length, shows the ore to be very uniform in general and to run from four to eight per cent in copper. Below the 50-foot level the vein inclines entirely away from the shaft, and the formation of its walls down to the bottom from that point, as nearly as

could be ascertained, is a soft granite. At the 154-foot level a cross cut was run to strike the vein. This part of the work could not be examined owing to the fact that there was still about 48 feet of water in the shaft; but the former owners stated that in this cross cut they passed through 44 feet of granite and 12 feet of mineralized vein matter when a great flow of water was encountered forcing them to abandon the work. The water appeared to come from a regular fissure, probably the same that was entered by the winze above. They managed, however, to enter this fissure three feet and obtained some samples before they were driven out by the water. It was estimated that at this cross cut there must be from 12 to 15 feet of vein matter yet to cut before reaching the hanging wall. The vein matter is more than double the width here that it is in the 50-foot tunnel above, and the quartz, feldspar and clay seams or talc are in the same relative position, having only greatly increased in width. The samples upon being assayed, were found to contain a greater percentage of copper than the ore in the drift above. The fissure on the surface does not contain a large percentage of copper, but it is found in the form of sulphides almost altogether. At a depth of thirty feet in the shaft the ore is much higher grade, running from 4 to 7 per cent, and is quite uniform in character. The assays taken as a whole, show that the ore in the fissure contains from three to five dollars to the ton in gold and silver values.

From the present development any practical mining man would be convinced that the property is a mine, for there is every certainty of cutting a great width of vein at a depth of from three to five hundred feet. The development work planned by the company on this mine after the water has been removed, is the extension of the 154 foot cross cut until the full width of vein has been cut, and the continuation of the shaft to the depth of 300 feet where another crosscut will be made. The water was being removed by means of a "whip," and from the headway that had already been made since work was started, the shaft must have been drained in ten days by an immense hemlock beam pump worked to advantage, and will continue on at the rate of two shifts a day.

The cost of labor is the same as at the Montana Verde. The company now have at work all the force that can be worked to advantage, and will continue on at the rate of two shifts a day.

There are three excellent prospects in the San Jose group outside of the mine itself. The ore in these is in the form of carbonates and oxides and is found in veins three to five feet wide, one of which can be readily traced for a long distance. Another is capped on a hill by an immense hematite iron mass which itself carries copper. All these have good wagon roads from one another and to the mine. Ten additional pertenencias have been taken up by the company along the side lines of the San Jose to prevent future possible interference. Although freighting by wagon to and from Altar or even Tucson is not expensive owing chiefly to the splendid roads, it will not be long that this means of transportation will have to be depended upon, for a narrow gauge railroad is now under process of construction from a point on the Gulf of California to Altar and probably to connect with the Sonora road. From statements made by Mr. Holmes, who is the chief prospector and manager of the mine, it was learned that the route already selected will bring it within a

## POPULAR WANTS

One-half cent a word each insertion. No advertisement taken for less than 25 cents.

## FOR RENT

FOR RENT—Alfalfa ranch. A first-class alfalfa ranch with good fences and comfortable house, shade trees, vegetable and flower garden; best water of soft water in the valley. Chickens, turkeys and Jersey cows. Will rent for term of years at low figures, or will trade for city property. Gates M. Fowler, 143 South Third street, Phoenix, Arizona.

## ROOMS FOR RENT

FOR RENT—A nice, cool front room, east front, bath and electric light. Apply cor. 5th ave. and Van Buren St.

## BUSINESS CHANCES

WANTED—Representatives for sale of bonded and tax paid standard whistles; good opportunity for right men. The Associated Distillers Distributing Co., Monon Bldg., Chicago, Ill.

A—Capital furnished to work good gold or copper claims. Capital, 34 Caweb Bldg., Cincinnati.

AN EXCEPTIONAL and permanent life position with \$250,000 corporation, on a salary of \$1800 per annum and commissions that will double the salary, is open for a first-class man competent to fill district manager's position and invest \$1500 to \$2500 in the business. Investment secured by corporation's funds in your possession. Don't make application unless your record will stand the rigid investigation that we invite regarding our corporation. Address Auditor's Department, 521-525 Manhattan Building, Chicago, Ill.

## MISCELLANEOUS WANTS

MRS. ELIZA A. EDWARDS, expert card reader, tells past, present and future: Ladies, 25c; gentlemen 50 cents. 221 Buchanan street, corner of Third street.

BESSES WANTED—50 to 100; will pay cash. Mark Roddin.

WANTED—Unfurnished room, with board, for old lady. Terms must be reasonable. Call or address 806 north Third street.

WHEN IN NEED of a quick and reliable messenger boy call up Palace Messenger Service, Phone 741, 10 South Center street.

## SITUATIONS WANTED

WANTED—Cash boy at the New York Store. Apply early Monday morning.

WANTED—First class agent who can prove results. We can offer a proposition you have never heard of before, very profitable, sells at sight to every store keeper. We would not be surprised if you would go into it yourself, when it is explained to you. Address Y 24, care Lord & Thomas, Chicago.

A FIRST CLASS COOK desires position, either hotel, ranch or mining camp. A. box 188, Phoenix.

## HELP WANTED

WANTED—Girl for general housework. 48 South 5th Ave.
